FOR IMMEDIATE RELEASE

Breast Patient Navigator Certification Earned by Nurses at Derry Imaging Center

Derry, NH—Derry Imaging Center is the only independent diagnostic imaging center in New Hampshire to provide breast health nurse navigator services for patients after mammogram results have concerns. From the first instance when a suspicious area of the breast is detected via 3D mammography, and following through any biopsy, diagnosis, surgery and cancer treatment, patients have immediate access to the guidance and support of a Breast Health Nurse Navigator.

Renee Bunker, CN-BN, recently received certification from the National Consortium of Breast Centers as a certified Breast Nurse Navigator, and Deb Hamel, CN-BI received her certification as a certified nurse in Breast Imaging. The certification program provides advanced achievement beyond licensure requirements, providing a specific set of skills for enhanced care for patients going through the trial of breast cancer diagnosis and possible surgery and cancer treatment.

Renee Bunker has 16 years of experience in women's health including four years as a breast health nurse. Deb Hamel has specialized as a breast imaging technologist for over 20 years.

"We are very proud to be ACR accredited as a Breast Imaging Center of Excellence," said Heidi Clark, director of Derry Imaging Center. "The advanced certification that our nurse navigators achieved, validates the extra levels of competency and enhanced care that they provide to our patients."
